

Editorial readiness review

Illustrative manuscript · 42 pages · Generated example

This document demonstrates the structure and level of prioritization of a Philologica report. It is not based on a customer document, does not represent a guaranteed result, and every finding requires human verification.

OVERALL STATUS	SCOPE	HUMAN REVIEW
Revision recommended	Citations, terminology, argument	Required before changes

What the report prioritizes

- 1. Issues that may block submission or weaken traceability.
- 2. Consistency problems that affect interpretation.
- 3. Opportunities that can strengthen the argument.

PRIORITIZED FINDINGS

Findings linked to the document

Priority	Location	Finding	Recommended verification
HIGH	§2.3, §4.1, §4.4	Three in-text citations have no matching bibliography entry.	Confirm source identity and add or remove each reference.
MEDIUM	§2.1 → §4.2	The central term changes definition between chapters.	Choose one definition or explain the conceptual change.
OPPORTUNITY	Conclusion, ¶3	A new claim appears without development in the main argument.	Support it earlier, qualify it, or remove it.

Interpretation rule

A finding is a review prompt, not an automatic correction. The author or editor should inspect the cited passage, verify the evidence and decide whether a change is appropriate.

Cómo convertir los hallazgos en decisiones

Este informe es un ejemplo ilustrativo y no procede de un documento de cliente. Muestra cómo Philologica separa el hallazgo, su ubicación, la evidencia disponible y la acción que debe verificar una persona.

HALLAZGO	DECISIÓN HUMANA
Cita sin referencia bibliográfica	Comprobar la fuente, completar la referencia o retirar la cita.
Cambio de definición entre capítulos	Unificar el término o justificar explícitamente su evolución.
Afirmación nueva en la conclusión	Desarrollarla antes, matizarla o eliminarla.

The complete product can include additional checks depending on the selected tool, document, plan and processing depth. Visit app.philologica.com for the current workflow and limits.
